

A B S T R A C

A blocking system for file cabinets that consists of a pull shaft (e) linked to each drawer/guide (c), which operates a corresponding blocking device, and all the blocking devices of all the drawers are
5 correlated to each other such that opening one of them prevents all others from being opened:

It consists of a support platen (1) fastened to the furniture, which defines a groove-rail (11) with at least two sections (11a and 11b) angled between each other, a mobile blocking element (2) outfitted with
10 two emerging bolts (2a and 2b) that can move linearly, guided on the said groove-rail (11) upon being pulled with the movement of the corresponding shaft (e), and mobile arms (3a and 3b) that are aligned between each other and which can move linearly within a maximum amplitude (a) on a vertical rail (12) defined on the support platen (1)
15 where they are guided.

Applicable to officer furniture and similar furniture.
